“Life: a Work in Progress”

A slide lecture by renowned nature photographer, Frans Lanting

Based on Lanting’s up-coming book exploring evolutionary patterns in nature.

Hailed as one of the great nature photographers of our time, Frans Lanting portrays wild creatures as ambassadors for the preservation of complete ecosystems. The former Director of Photography of the National Geographic Society wrote, “As a chronicler of natural history today, Frans Lanting is a singular extraordinary talent. He has the mind of a scientist, the heart of a hunter, and the eyes of a poet.” Not surprisingly, Lanting’s work has appeared in virtually every major magazine in the world including National Geographic, Life, Audubon, Stern, Figaro, and GEO. Exhibits featuring his photographs have appeared at major museums in Paris, Milan, Tokyo, New York and Amsterdam.
